

KRUSHNA HARIDAS BABHULKAR

Full-Stack Software Developer | Java · Spring Boot · React

+91 7350629754 | babhulkarkrushna2004@gmail.com | [GitHub: github.com/Krushna-358](https://github.com/Krushna-358) | Indira Nagar,
Hiwarkhed, Maharashtra

PROFESSIONAL SUMMARY

Computer Engineering final-year student with practical experience in full-stack development using Java, Spring Boot, and React. Comfortable working with relational databases, REST APIs, and DSA fundamentals. Looking for a Software Developer role to apply my skills and grow within a collaborative team.

TECHNICAL SKILLS

Languages: Java (Advanced) · Python · JavaScript (ES6+) · HTML5 · CSS3

Frameworks & Libs: Spring Boot · React.js · JDBC · REST API Design

Databases: MySQL · PostgreSQL · SQL Query Optimisation

CS Fundamentals: Data Structures & Algorithms (DSA) · OOP · Problem Solving

Tools & Platforms: Git · GitHub · VS Code · IntelliJ IDEA · Postman

Cloud & Infra: AWS Basics (EC2, S3, IAM, RDS) · Linux/Unix CLI · Networking Fundamentals (TCP/IP, DNS, HTTP)

Support Skills: Troubleshooting · Root Cause Analysis · Incident Documentation · Customer Communication · SaaS Platforms

Soft Skills: Team Collaboration · Communication · Time Management · Adaptability

PROJECTS

Personal Finance Visualizer | Spring Boot · React.js · PostgreSQL · REST API

- **Overview:** Developed a full-stack web application that enables users to record, categorise, and visualise personal financial transactions, providing actionable insights into spending habits.
- **Back-End:** Designed and implemented secure RESTful APIs using Spring Boot, applying JWT-based authentication to protect user endpoints and ensure data integrity across all financial operations (create, read, update, delete transactions).
- **Database:** Modelled a normalised PostgreSQL schema with tables for users, categories, and transactions; wrote optimised SQL queries for aggregation reports (monthly totals, category breakdowns).
- **Front-End:** Built a responsive single-page application in React.js with reusable component architecture; integrated Chart.js to render interactive bar charts, pie graphs, and trend lines that update dynamically on data changes.
- **Impact:** Application supports multi-user accounts, handles concurrent sessions, and reduces manual expense tracking effort by providing automated monthly summaries and visual dashboards.

Travel Companion — Train Ticket Booking & Management System | Java · MySQL · JDBC

- **Overview:** Engineered a console-based Java application replicating core railway reservation workflows, from user registration through to ticket generation and cancellation management.
- **Core Features:** Implemented modules for user sign-up/login (with password hashing), seat availability checking, ticket booking & PNR generation, booking history retrieval, and automated seat release on cancellation.
- **OOP Design:** Applied object-oriented principles (encapsulation, inheritance, polymorphism) to model domain entities — User, Train, Seat, Booking — resulting in a maintainable, extensible codebase following SOLID guidelines.
- **Database:** Designed a relational MySQL schema with foreign-key constraints linking users, trains, seats, and bookings; used JDBC PreparedStatements to prevent SQL injection and manage transactions for atomicity.
- **Outcome:** Successfully demonstrated end-to-end ticket lifecycle management, including concurrent booking conflict resolution, in a command-line environment with sub-second query response times.

EDUCATION

Bachelor of Technology — Computer Engineering | CGPA: 7.18 / 10.0

Government College of Engineering, Yavatmal, Maharashtra · 2022 – 2025 (Pursuing)

Higher Secondary Certificate (HSC — Science) | 84.83%

Saint Paul's Academy, Akot, Maharashtra · 2022

LANGUAGES

Marathi (Native) **Hindi** (Fluent) **English** (Professional)
